

1. Create a simple personal webpage using HTML5 elements such as headings, paragraphs, lists, tables, images, audio, video, and hyperlinks.

```
<!DOCTYPE html>

<html>

<head>

    <title>Personal Webpage</title>

</head>

<body>

<h1>Javvy</h1>

<p>I am a BCA student.</p>

<img src="" alt="My Photo">

<h2>About Me</h2>

<p>I like learning new technologies.</p>

<a href="https://github.com">GitHub</a>

<h2>Skills</h2>

<ul>

    <li>HTML</li>

    <li>CSS</li>

    <li>JavaScript</li>

</ul>

<h2>Hobbies</h2>

<ol>

    <li>Football</li>

    <li>Reading</li>

</ol>

<h2>Education</h2>

<table border="1">

    <tr>

        <th>Year</th>

        <th>Course</th>

    </tr>

    <tr>

        <td>2024-Present</td>
```

```
<td>BCA</td>

</tr>

</table>

<audio controls>

  <source src="" type="audio/mpeg">

</audio>

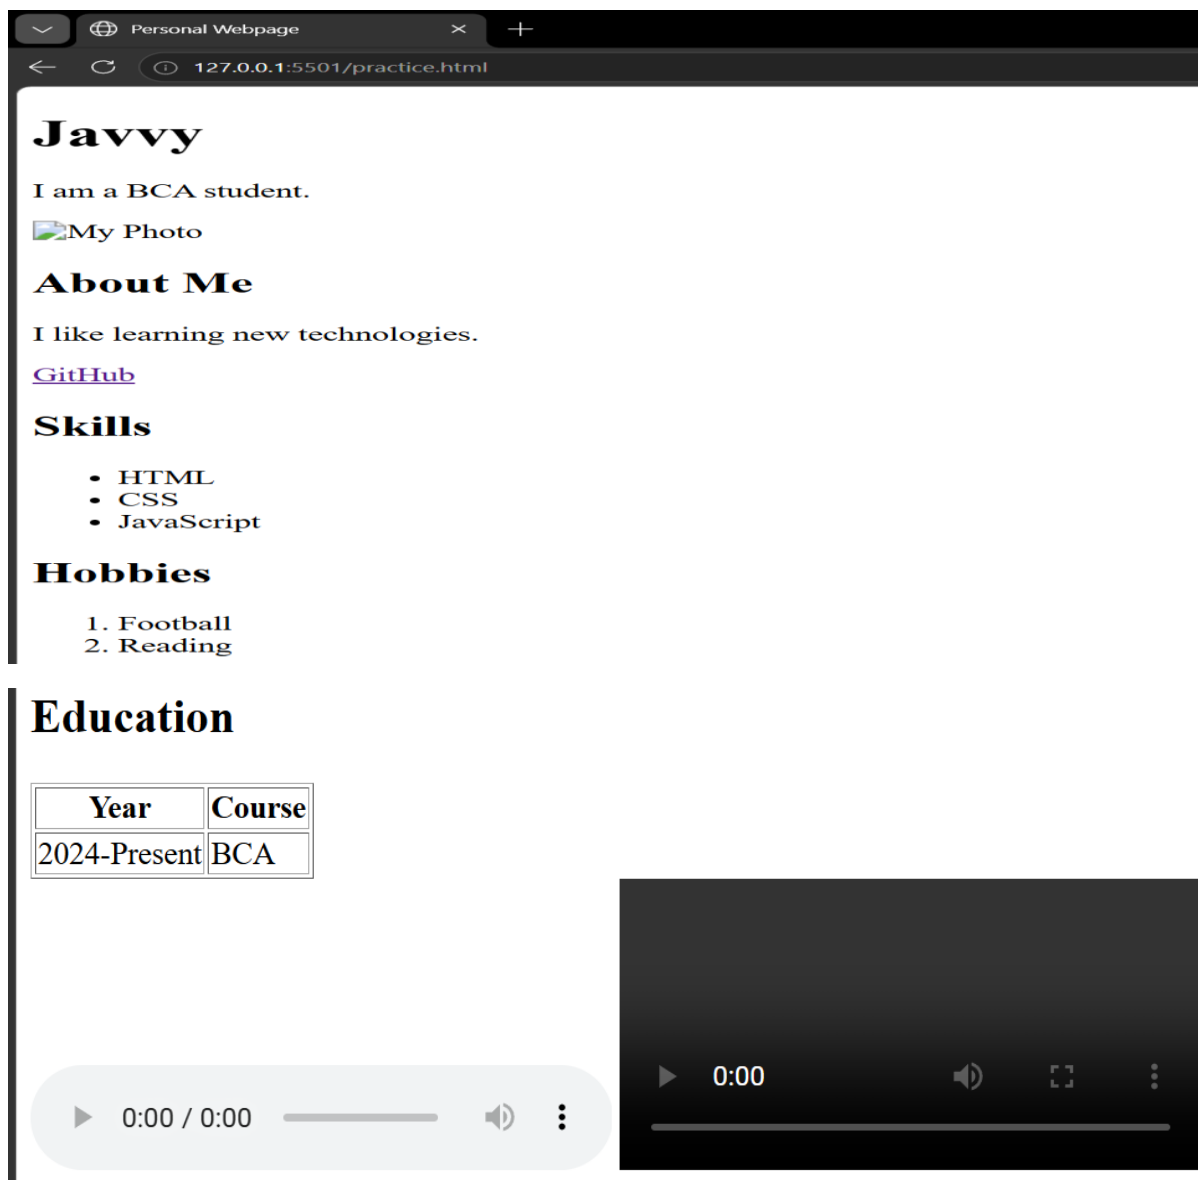

<video controls width="300">

  <source src="" type="video/mp4">

</video>

</body>

</html>
```

2. Design and style a responsive web page using CSS3 properties including colors, backgrounds, margins, padding, text formatting, and alignment.

```
<!DOCTYPE html>

<html>

<head>

<title>Responsive Page</title>

<style>

body {

    background: lightgray;

}

div {

    background: white;

    margin: 20px;

    padding: 20px;

    text-align: center;

}

h1 {

    color: red;

    font-size: 25px;

}

@media(max-width:600px) {

    div {

        width: 90%;

    }

}

</style>

</head>

<body>

<div>

    <h1>Welcome</h1>

    <p>Responsive Web Page</p>

</div>

</body>

</html>
```

3. Write JavaScript programs to demonstrate variables, operators, conditional statements, loops and arrays.

```
<!DOCTYPE html>

<html>

<head>

  <title>JavaScript Basics</title>

</head>

<body>

<h2>JavaScript Programs</h2>

<p id="output"></p>

<script>

let name = "John";

let age = 20;

let a = 10, b = 5;

let sum = a + b;

let result;

if (age >= 18)

  result = "Adult";

else

  result = "Minor";

let numbers = "";

for (let i = 1; i <= 5; i++)

  numbers += i + " ";

let fruits = ["Apple", "Banana", "Mango"];
```

```

document.getElementById("output").innerHTML =

    name + "<br>" +

    age + "<br>" +

    sum + "<br>" +

    result + "<br>" +

    numbers + "<br>" +

    fruits;
</script>
</body>
</html>

```

4. Develop a webpage that dynamically changes content, colors, and images using DOM manipulation.

```

<!DOCTYPE html>

<html>

<body>

<h2 id="title">Welcome</h2>

<p id="text">Original Text</p>

<br><br>

<button onclick="content()">Content</button>

<button onclick="color()">Color</button>

<button onclick="image()">Image</button>

<script>

function content() {

```

```

    document.getElementById("text").innerHTML = "New Content";
}
function color() {
    document.getElementById("title").style.color = "red";
}
function image() {
    document.getElementById("img").src = "image2.jpg";
    document.getElementById("img").alt = "pic2";
}
</script>
</body>
</html>

```

[OUTPUT GIVEN IN VIDEO]

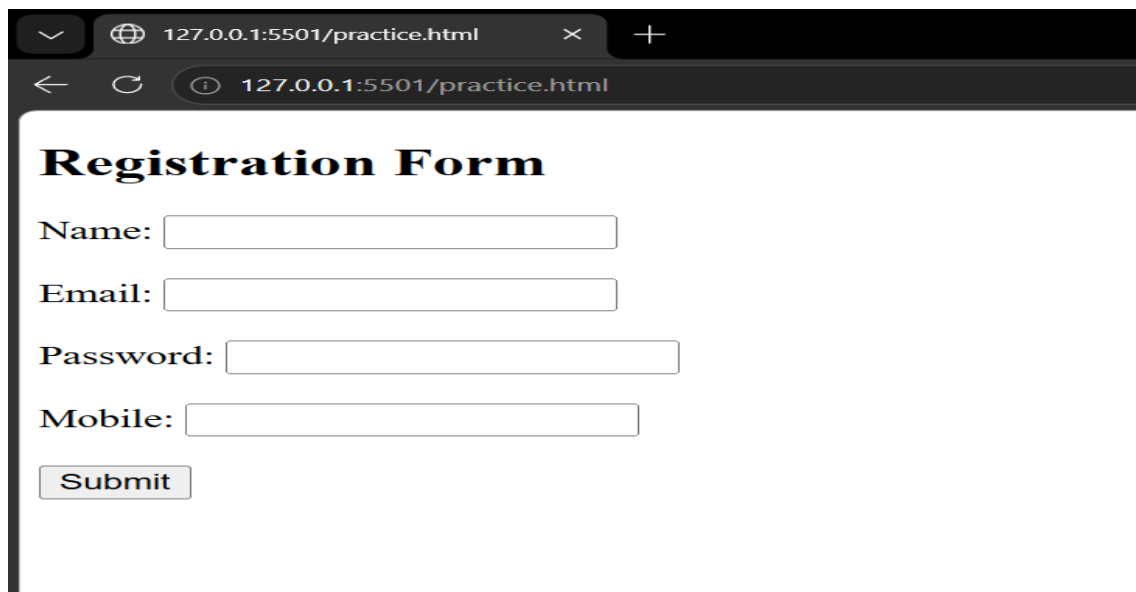

5. Develop a form validation application using JavaScript to validate user input fields such as name, email, password, and mobile number.

```

<!DOCTYPE html>
<html>
<body>
<h2>Registration Form</h2>
<form onsubmit="return validate()">
Name: <input type="text" id="name"><br><br>
Email: <input type="text" id="email"><br><br>
Password: <input type="password" id="pass"><br><br>
Mobile: <input type="text" id="mobile"><br><br>
<input type="submit" value="Submit">
</form>
<script>
function validate() {
    if(document.getElementById("name").value == "")
    {
        alert("Enter Name");
        return false;
    }
}

```

```
if(document.getElementById("email").value == "")
{
    alert("Enter Email");
    return false;
}
if(document.getElementById("pass").value == "")
{
    alert("Enter Password");
    return false;
}
if(document.getElementById("mobile").value == "")
{
    alert("Enter Mobile Number");
    return false;
}
alert("Form Submitted");
return true;
}
</script>
</body>
</html>
```

The screenshot shows a web browser window with the address bar displaying "127.0.0.1:5501/practice.html". The page content includes a heading "Registration Form" and four input fields labeled "Name:", "Email:", "Password:", and "Mobile:". Below these fields is a "Submit" button.

Registration Form

Name:

Email:

Password:

Mobile:
